

Cloud Architecture Audit Template

Self-audit your AWS or GCP setup against the Well-Architected pillars in one afternoon.

Operational Excellence

- IaC for 100% of infra
- Centralized logging
- Runbooks for top 5 incidents

Security

- Root account locked and MFA enforced
- Least-privilege IAM reviewed
- Secrets in a secrets manager
- KMS encryption at rest

Reliability

- Multi-AZ for stateful services
- Backups tested quarterly
- RTO and RPO documented
- Chaos test plan

Performance Efficiency

- Right-sized instances
- Caching at edge and DB
- Async over sync where possible

Cost Optimization

- Reserved instances reviewed
- Idle resources flagged
- Tagged for chargeback

Sustainability

- Region picked for renewable mix
- Workloads scale to zero where possible
